

Post-fix: DPM pressure ( $\text{meV cm}^{-3} \rightarrow \text{keV cm}^{-3}$ ,  $\times 10^{-6}$  applied in gas\_profiles.py)  
 Residual DPM/A10  $Y_{\text{SZ}}$  ratio  $\approx 10\text{--}30$  is physical (DPM = total gas, A10 = hot ICM)

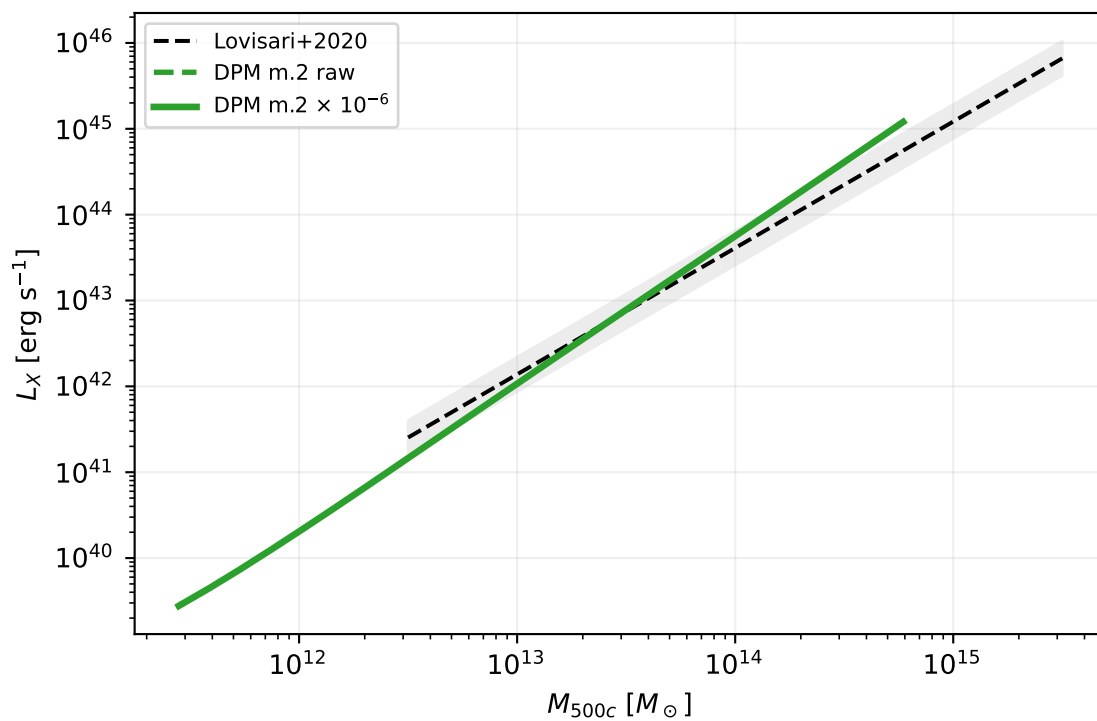

tSZ  $Y \cdot D_A^2$ : unit correction diagnostic

Emission-weighted  $T$ : unit correction

$L_X$ - $M$ : unit correction

$Y_{\text{SZ}}$  ratio: DPM / A10 (measures unit offset)
